

FX Guru

FXGuru is an app that lets you create your own hi-tech movies; no video editing skills necessary. They have a bunch of effects lasting about 10 seconds that

add the “sci-fi” to any movie clip, with sounds that add to the drama. The app comes with 3 effects built-in — a satellite crashing to the ground, a UFO flying in space and an explosive barrel that will “destroy” everything in the video. You’ve got virtual decals as markers to help align the effects in place, so that your shots look realistic. For iOS, check out Action Movie

FX freely available for iPhone and iPad.
