

SpeedTest

Internet companies love to advertise about their blazing Internet speeds that they want to sell you. Maybe you're wondering whether you're actually getting what was promised? Or you have a hunch that your cable Internet is feeling slow all these past few days. Having the SpeedTest app handy will give you clarity. Test can take from a minute to a few, depending upon your connection. But you'll come to know of the download, upload speeds and the latency between you and the server. Finally, it

also keeps a history of all your tests, separating the ones run on WiFi and on 3G, to help you assess how your Internet has been.

Carbon App Sync and Backup

True to Google's cloud-based approach to everything, they don't provide a desktop manager for computers to backup your data to. But then, there's no default way of getting all your apps and data from one phone to another. So what happens when you're upgrading or lose your phone? What about all your Temple Run achievements? Unfortunately, most App backup tools on Android need rooting the phone. But this app doesn't — you just have to install their desktop client and connect the phone one time as a work-around. Plus, it has a simple interface that allows you to choose which apps you want to backup.
