

KytePhone

Are you scared to give your smartphone to kids just wanting to play a harmless game, fearing if they'll delete an important app or browse through your private photos in the process? Or maybe you've got your kid an Android device but don't want him/her to wander off to places you don't want. With KytePhone, you can choose the apps and games they can access and set a time limit for each app. They get a limited dial-pad where they can only call to predefined contacts. You can get a GPS feed of their location on their website, and also track

their activity.

Easy Battery Saver

The perennial problem with smartphones has to be the never-sufficient battery life. Easy Battery Saver can help you curtail on some battery leakage by smartly tweaking the phone's settings. You have presets like General, Intelligent, Super and Custom power saving modes. It will schedule a shutdown of certain features when you shut down, on your bed at night that is. It also shows how much time can you use the phone for a particular activity (like talking, watching a video, or listening to audio etc). It also has tutorials to help users conserve battery

on their phones better.
