

Vlingo

Have an iPhone 4 and felt screwed over that you don't get Siri? Or do you have an Android phone that's yet to get Google Now? Vlingo is a 3rd party virtual butler that does things for you, by just asking. You can ask it to send text messages and emails, update Facebook and Twitter statuses, ask for directions, find places of interest or restaurants. You can also ask it to look up your Calendar or ask it some general knowledge questions. It will convert your question into a query, scour the internet and try to

find a suitable answer.
