

Google Maps

When travelling, understanding directions and routes is one of the most common problems faced by most travelers. This is why we suggest getting the Google Maps app on your phone. Google's web-mapping service is one of the most detailed mapping apps out there. It comes with 3D maps, GPS navigation, driving, walking, biking and public transit directions, and traffic information. Google Maps guarantees easy navigation and ensures that

your cab driver doesn't take you for a ride, so to speak. The app also syncs beautifully with the Zomato app and helps you discover eateries in the vicinity. From finding directions to your hotel to discovering flea markets, Google Maps provides user-friendly mapping technology and information

about local businesses, services and products.

Couchsurfing

One of the things we look forward to the most while travelling is meeting new people. And thanks to the Couchsurfing app, connecting with travel enthusiasts and locals across the world has become so simple. With the Couchsurfing app, you can find locals who'll be happy to host you while you're travelling. The app lets you search for people to meet with or hosts, send requests to surf a couch, message your hosts and new acquaintances and check out their profiles to see if the people you're meeting are safe. If you want to spend less time on your computer and more time exploring, include the Couchsurfing app on your phone while travelling.
