

Google Goggles

Discovering new things and places is the essence of travelling. We've all stumbled across paintings, artwork or simple sign-boards while travelling and wondered what they meant. This is where Google Goggles comes in handy. With this app on your phone, you can use take a picture of anything that catches your eye and start a search. Google Goggles then looks in its database and helps you with vital information regarding your search. You can also scan QR codes and bar-codes or even just your new friend's contact

card; Google Goggles makes a great on-the-go assistant.

Wi-Fi Finder

Let's admit it: travelling isn't exactly cheap. There are all sorts of expenses involved such as stay, food and data roaming. Over time, smart-phones have enabled us to curb a few of these expenses. One such app is the Wi-Fi Finder app that helps you avoid data roaming charges by scanning for paid and free Wi-Fi hotspots in your vicinity. What's awesome is that the Wi-Fi Finder also gives hotspot details, call location and directions for the nearest hotspot for a secure connection. What's more, Wi-Fi Finder is available for free and works both,

online and offline.
