

Shake to Charge Battery

This app is a lie. And you'll only realize that after you're done wasting over 10 minutes shaking your phone, hoping that it'll salvage the dying phone battery. But it's great for fooling your friends. Just shake the phone in front of them and claim that the Kinetic energy generated by shaking your phone is actually charging your battery. The app actually

has an image of a battery that displays the battery level bar rinsing slowly as you shake your phone. Watch your friends all

awestruck and laugh devilishly in your head. Need we say more?

Sleep101

Smartphones can partially be blamed for our sleepless nights. Actually the internet is, and ever since it's come to our phones, constant pinging, tweeting and late night conversations have drastically affected our sleeping patterns, leading to far less productivity the next morning. What if the smartphone itself could help you sleep better? Sleep101 is a sleep-tracking mobile application, which enables users to track their sleep. While

we're happy that it's productive here's where it gets all creepy. The app also monitors all your tossing and turning in the night and wakes you up on a time based on your sleep patterns. Sleep101 is well, Sleep101. The app gives you interesting advice on our sleeping pattern so that you always wake refreshed and happy. There are other apps that do this but

not as comprehensive.
