

ANDROID

Power Toggles

Power Toggles is an app that lets you design widgets with toggles of your choice. Toggles provide you with one-touch (in most cases, sometimes two-touch) access to changing a setting that otherwise would require a couple of steps to change. It can be anything from toggling your mobile hotspot, Wi-Fi, LED flashlight, Bluetooth, 2G/3G, Rotation lock, NFC to display timeout. You can have as many 'Power Toggles' widgets in multiple homescreens as you'd like. You can even put one at the top of your notification bar,

if your phone maker hasn't put one for you already.

Contact Sync for Facebook

All Android phones may not come with Facebook contact syncing functionality built-in. For them, Contact Sync for Facebook is the answer. This tiny app downloads high-resolution display pictures of all your Facebook friends. Provided your contact names have proper name surname order, it will automatically append photos to those contacts. The best part is that whenever your friends change their profile pictures on Facebook, they automatically get updated. If that wasn't enough, it even appends status messages and birthdays to your contacts (this feature may not work

on all Android phones).
