

Monthly Calendar Widget

Surprisingly the stock Android widgets don't include a month calendar. The Monthly Calendar Widget fills that gap. It's a monthly view with a simple transparent design that you can put on one of your home screens for a quick view. The two arrows at the top quickly allow you to go back and forth between months. Speaking of stock widgets missing from Android, those time-weather types that were iconic to HTC's Sense UI, are missing these days. Check out Beautiful Widgets; it may cost a dollar but has a great

variety of those type of widgets to decorate your home screen with.

AirDroid

AirDroid is a free app (similar to Samsung's Kies Air app for its Galaxy phones) that syncs content wirelessly with computers. Keeping the computer and phone connected to the same Wi-Fi network and using any web browser, you can access phone contacts, read and send text messages, manage apps on your phone, upload/download files, manage photos, music and even ringtones. It even shows copied text in a clipboard. File transfers are terribly slower compared to using a USB cable. Nonetheless, a good app to use for small files.
