

NEWS AND READING

Reading on small-screened mobile devices has never been so pleasing thanks to the apps below that make the most of the size and touchscreen capabilities

When publications went digital, initially we saw the superimposition of print layout on famous newspaper websites. But simply scanning and uploading newspapers wasn't doing true justice to the medium. Thus, true portals were born where each news item was independently accessible, shareable and able to be commented on. But, with the explosion of tablets like the iPad, we're seeing the rebirth of the design element that print medium used for decades. But it's mixed with the dynamism of the internet. Simply put — a newspaper that updates itself as and when news happens. Apps have changed the way we consume written content forever. They stitch together content from various sources so you don't have to keep checking individual publications for what's good to read. Some apps use not just algorithms, but actual human editors, who curate the content posted on the app — thereby giving you the best information in one place. Lastly, the touchscreen resolutions are so high that you can't see pixels make reading as delightful an experience as reading an actual paper (maybe even better).
