

Dictionary

Dictionary for Windows Phone is a minimalist app that does the job rather well. For one, it has offline data to over 1,00,000 words and definitions, so it won't be connecting to the internet every now and then. Next, it's pretty fast — start typing a word and it narrows down to what you're looking for in the blink of an eye. Finally, it has an interesting main screen filled with random words that are arranged in a way we'd describe as “disciplined chaos”.

Tasks

Tasks is a free organizer app made exclusively for Windows Phone. It serves as a benchmark for beautiful-looking apps on the platform. You can set a task, add a reminder, add priority etc. Tasks can be organized

in categories that you create. A photo or voice memo can also be attached to your task. You can also put live tiles of the app on your homescreen for quickly glancing through what's next on your life agenda. A few other highlights of this app include syncing with Outlook

via Exchange Server, and even Office 365.
