

Application Lock Free

Sometimes a friend or acquaintance is using your phone and you're worried about him snooping through an app that you don't want him/her to. Application Lock Free is an app that will

password-protect apps. In case you forget your password, using the answer to your secret question, you can reset it. The free version lets you lock only one app; buying the app will allow you to lock many. If you prefer locking individual files instead of the whole app, try Personal

Lock Lite.

Advance OS and LED

This app has a truckload of features. To begin with, you can customize the Black-Berry's LED to blink to your customization depending upon the notification. There's battery usage statistics, backup and export of contacts. You can use LED as a flashlight, make your phone read your messages, set a restart schedule for the phone and set audible alerts on battery status. It ain't over yet — you can make the phone prompt the saving of an unknown number after a phone call, automatically change your wallpaper and much more. Just give this app a try; it

has so much to offer.
