

Rail Maze

Rail Maze is an interesting puzzle game. The premise of the game involves a locomotive and its bogies that need to be taken from their starting point to their destination. The puzzle is in the randomly arranged path of railway tracks with circular knobs that make the train go in a particular direction. You need to turn all the knobs in accurate positions first, then click to release the train from its parking shed. If all goes well, the train reaches its destination safely and you proceed to the next maze. But even if one knob isn't pointing correctly, it causes a derail, thereby restarting the level.
