Linux

Purists would have us write GNU/Linux instead of only Linux. Linux by itself is only a kernel it requires a lot of embellishments and additions which are provided by GNU to provide you with a useful operating system. Linux is the go to operating systems for sysadmins when setting up servers, but desktop and laptops are where Linux has not been able to leave a mark. Even Linus Torvalds has a few misgivings about that, during his interview at Aalto University in 2012 mentioned that “I started Linux as a desktop operating system. And it’s the only area where Linux hasn’t completely taken over. That just annoys the hell out of me.” In the recent years the popularity of Linux has been on the rise, this can be attributed in a large measure to the excellent work carried out by the maintainers and developers of distributions, which are better known as distros.
