

contrast, sharpness, saturation and remove noise from the image.

Artistic

This applies various preset filters to the image – Black and White, Lomo, Antique, Sepia, Whiteboard, Watercolour, Negative and Sketch. Interestingly, the thumbnails above each of these settings gives you a quick look at how your image will look after applying the setting. This means, if you don't need reading glasses, you can actually save time by choosing what you need, instead of trying out each one.

Styles

These are usually effects applied to the image to make it look like a photograph in a frame, for example. Options are Beautify, Sixties, Grain, Aged Photo, Film Strip, Half-tone, Cartoon and Big Eyes. Of these, the first and last (Beautify and Big Eyes) as the names suggest, only work when the phone is able to identify a face in the frame.

Videos

With videos also, you can select and edit them. Basic editing such as cropping the video length is supported. You can also Enhance the video by changing Brightness, Contrast and Colour depth, and also edit the volume at which the video plays. You can also play the videos back via
