

COLLABORATIVE SERVICES

The cloud also enables real-time collaboration, regardless of where you're located with respect to your friends or colleagues

Today, collaboration demands real-time exchange of files, ideas, messages, calls, etc. Cloud services are re-defining the way in which people collaborate over the internet, and have made it possible for startups to have teams that are spread over the globe, and sometimes don't even need an office to work out from. It's what made it possible for institutions to teach opencourseware to students across the globe, and is responsible in bringing the world closer.

As usual, there are numerous options to choose from, and that's why this chapter will help you find one that's right for your needs.

1. Collaborative Whiteboards

Collaborative whiteboards are widely used by academia for remotely interacting with students and discussing ideas related to course work. We use physical whiteboards daily to discuss, draw and make plans and timelines. Online cloud based whiteboards allow you and your team members/friends work on one shared whiteboard in real-time, allowing you all to mark and
