

- ▶ promote models for creating economic value for the public benefit; and
- ▶ promote the Mozilla Manifesto principles in public discourse and within the internet industry.

The manifesto itself is a comprehensive 10-point plan that details the path that the company chooses to take. In its entirety, it's as follows:

1. The internet is an integral part of modern life – a key component in education, communication, collaboration, business, entertainment and society as a whole.
2. The internet is a global public resource that must remain open and accessible.
3. The internet should enrich the lives of individual human beings.
4. Individuals' security on the internet is fundamental and cannot be treated as optional.
5. Individuals must have the ability to shape their own experiences on the internet.
6. The effectiveness of the internet as a public resource depends upon interoperability (protocols, data formats, content), innovation and decentralised participation worldwide.
7. Free and open source software promotes the development of the internet as a public resource.
8. Transparent community-based processes promote participation, accountability and trust.
9. Commercial involvement in the development of the internet brings many benefits; a balance between commercial goals and public benefit is critical.
10. Magnifying the public benefit aspects of the internet is an important goal, worthy of time, attention and commitment.

One thing that comes to mind immediately when you read the manifesto provided by the organisation in detailing its aims for the future is that it constitutes goals entirely unlike any other organisation in the browser category. The not-for-profit nature of the organisation shines through, as does the general intent to make the internet a better place for everybody involved.

Now, for the more visible of components, the main browser itself. Over the past few years, as WebKit-based browsers such as Chrome and Safari have gathered clout, the general clamour has been that, coming full circle, it is Firefox that has become archaic in its approach to web browsing, and that the Gecko model can't keep up with latest developments in the tech space. It's worth mentioning here that it was Firefox, in fact, which began
