

- **Touch ID:** Touch ID which is one of the main features of the new iPhone 5S is supported by iOS 7, but all iPhones can't make use of this feature because their hardware doesn't have the fingerprint scanner. So this feature is exclusively limited to the iPhone 5S.
- **Slo-Mo & Burst Modes:** The Slo-Mo video capture feature of iOS 7 can be utilised only by iPhone 5S. The burst photo mode where user can pictures continuously also doesn't work on any iPhone except 5S.
- **Auto Image Stabilization & Video 3x Zoom:** Both these features work only on iPhone 5S
- **Siri:** The new and improved Siri cannot be used by iPhones that are older than 4S.
- **Photo App Filters:** iOS 7 has its own photo-app filters; but can run only on iPhone 4 or later, iPad 3 or later and iPod 5th generation.
- **FaceTime over cellular:** Face-Time can now be used over cellular networks. But, it works only on iPhone 4S or later, third-generation iPad or later, fifth-generation iPod touch.

Now once you make sure that your device is compatible with iOS 7, you need to choose how you would want to upgrade your OS. You may consider backing up your device before you start the upgrade just to avoid losing
