

to apply these settings. This will sync all the device data with your computer via iTunes.

The folder in which all your backedup data is stored is dependent upon the computer's operating system. In Mac computers, the backup is stored in Home/Library/Application Support/MobileSync/Backup/

For Windows PCs, the backup is stored in \Users\(\username)\AppData\Roaming\Apple Computer\MobileSync\Backup\

Syncing via iTunes will be a good option, if you don't have an iCloud account or you have more data than what Apple gives in default.

3. Taking a backup on both:

For extra-level backup of your device data, you can store the data both on your computer and on iCloud continuously. When iCloud is switched on, it turns off the automatic syncing via iTunes; but you can go and manually sync your device data to your computer via iTunes. For this, go to your device on iTunes, go to the Backup Section and select "This computer" option and click on "Back Up Now" option in iTunes. Simultaneously, you can take backup on iCloud by tapping on "Back up now" option in Settings > iCloud > Storage & Backup.

Upgrading your Device to iOS7:

Alright, you finished backing up your data. Now, let's get to the part where you upgrade to iOS7. Make sure your device is connected to charger so that the device does not run out of battery amid the upgrade.

You can choose to either install through Wi-fi if you have access to a Wi-Fi network or choose to use iTunes for upgrading the OS.

Upgrading on Wi-Fi

Upgrading is reliable on Wi-Fi but the speed depends on how good your Wi-Fi connection is. Apple makes it easy for you to upgrade the OS by simply going into the Settings and choosing "Software Update" under the General tab. Any iOS device with iOS 5 or later, automatically checks for the required OS updates.

This shows you the latest version of iOS 7 that you can upgrade to with some details and once you click on "Download and Install", it asks you to agree to Terms and Conditions. Once you agree, the download starts. OS updates are usually delta updates, where your device remains functional while you download the update. After the download finishes, the device
