

Taking a backup from iTunes

restarts and begins installing the OS. Soon, you get a fresh welcome screen of iOS 7.

Install using iTunes

If you wish to install using iTunes, just connect your device to your mac, open iTunes. Select your device and click on “Check for Updates” button in the Summary Section/Tab. It’ll show you the latest OS update and your present version. Click on “Update” to start the process. Once the update is downloaded and installed, the device will restart and you can see iOS7 up and running.

Restoring your Backup after Upgradation

So, you have finally upgraded to iOS 7; looks beautiful, doesn’t it? So, now you want your data back.

Restoring from iCloud:

If you are going through the “Setup Assistant”, choose “Restore from iCloud Backup” and login with your iCloud id and password. iCloud shows you three latest backups from the device you took the backup; choose the correct one and there you go, your data restoration starts!

If you have already reached the Home screen, then go to Settings > General > Reset > Erase All Content and Settings. It’ll give you three options; out of which select the “Restore from iCloud Backup” one; type the correct
