

can also change the order of what appears in the Notifications window by tapping Edit, and then dragging the items into their required order.

If you, like us, are vexed by the little red badges that appear on the app's icon if you've got a new update or a new message, you'd be pleased to know that there is a way to turn these off. Although, you'd have to do that separately for each app. To turn off the badges, go to Settings > Notification Center and scroll down to find all the apps. Tap on any of them, and set or change the alert style for each of them.

The one issue that might bother you is that the Notification Center is accessed even from the lock screen, and no one would want people snooping in on your messages and appointments even without your passcode. Luckily, Apple took care of that, and it is possible to restrict the Notification Center visibility from a locked screen. To do that, go to Settings > Notification Center and under Access on Lock Screen, and disable "Today View" and/or "Notifications View" to put away the Notification Center from the lock screen entirely.

3. AirDrop

AirDrop is Apple's new feature for interfacing wirelessly between iDevices. It was first introduced with Mac OS X 10.7 Lion, and has now made its way into the iOS 7 update for iPad, iPhone and iPod Touch. It comes in handy when you want to share a file with multiple devices. Since it uses a direct Wi-Fi connection the devices need not be on the same network.

You can set up AirDrop to send files to Contacts Only or Everyone. If you've set it up for the former, the iCloud details of the friend you want to
