

can - disable Siri, change default language and enter your personal Info (by selecting your contact). A new option is the Voice Gender where you can choose from Male or Female.

Siri can now read your mails and return your missed calls. Tell her to "Read my emails" and it will give you sender's name, time and date sent, and the subject of each email in turn. It will then ask if you want it to read the email, just say "Yes". It is also possible to turn on Wi-Fi, Bluetooth and other apps using voice commands like "Turn ON Wi-Fi". You can even go deeper in the menu by commands like "Open Mail Settings".

Another problem we Indians usually face is when Siri does not pronounce our names properly. Well, fret no more! You can fix this by saying "Siri, that's not how you pronounce this." It will then ask you to say the name again and lets you choose amongst the possible pronunciations available.

Siri now has a much better integration with Twitter. It will now answer questions like "What's trending on Twitter?". You can also ask what people are tweeting and search for hashtags too. Another thing to note here is that Siri's default search engine is now Microsoft Bing. You can change that by telling it explicitly to search elsewhere, like "Search Google for iPhone 5S".

5. Photos

With all other improvements, the biggest overhaul has been on the Camera Roll. Photos are now smartly grouped together on the basis of time and place where they were clicked. This makes sharing related pictures easier. Photos are now sorted into Years, Collections and Moments. When you open the Photos app, you'll see all pictures (little thumbnails of every picture, amazing piece of art) sorted by the years they were taken in. Tap on a Year to show Collections of pictures, like your trip to the Shivalik for example. And in each Collection, see photos organised into Moments according to time and location. This sorting hierarchy is supposed to make finding photos much quicker.

You can also edit your pictures in the new Photos app too. Open the photo and tap on Edit. You'll then have options to rotate the image, crop, enhance, remove red-eye or add one of Apple's eight new filters. Another good thing is that even if you've saved your edit, you can always revert back to the original image.

Photo Stream uploads your pictures to iCloud as you take them. To turn on this feature, go to Settings > Photos & Camera and slide the My Photo Stream switch to green. With iCloud, you can share your favourite pic-
