

Whoa! Turn down the animation or pass me the barf bag!

you to locate lost devices by visiting www.iCloud.com. It allows you to make your device play a sound for 2 minutes, lock it with a passcode or display a message on the screen with your contact number. You can also remotely erase media and other data from your device and restore it to factory settings. Unfortunately, there's a loophole in these security measures. The thief might turn off Find My iPhone and restore it to prevent you from using these features.

iOS 7 brings a solution to this problem with a new feature called Activation Lock. With this, turning off Find My iPhone and restoring the device requires your Apple ID and password. It will continue to display the custom message with your contact number even after the device is erased.

11. Camera: Burst mode

In iOS 7 you can shoot in burst mode, for situations when you want to get a perfect picture of a say baby or a cute little kitten who is constantly moving. The mode takes pictures in quick succession, so you can keep the best and delete the rest. Press and hold the volume up or down button to click consecutive shots. There's a separate Burst mode available on the iPhone 5s, that takes 10 pictures in a second and saves the non blurry ones on your Camera roll.
