

Another feature in the Camera is the ability to take stills while shooting a video. When you start shooting the video, a white button will appear on the screen and you can tap it to take still photos. However, this feature is only available for iPhone 5 and higher. Too demanding for lower models we suppose.

The new Camera app has a square camera option and you can just swipe and switch between your four cameras - video, photo, square and panorama. And like before, you can zoom in and out using two fingers together. It has the ability to turn on or off HDR, switch between front-facing and rear-facing cameras, and turn on or off flash with the touch of a button. You must also notice that the app has become faster to open and use, something that we're very happy about.

The Pano mode

12. FaceTime: Audio calls

For those of you with unlimited internet access, FaceTime now supports voice calls! iOS 7 adds the option to make audio only calls. Open FaceTime, go to the desired contact and press the phone symbol next to the video camera symbol to make a FaceTime voice call.

13. Safari improvements

iOS 7 brought a major visual overhaul to almost everything including Safari. The web browser has become easier on the eyes with a couple of other changes. It has become less obtrusive – things stay hidden until you scroll to reveal them, giving more area of display for the content.

Apple has introduced a unified smart search field in Safari. Tapping on the search field presents you with a list of your favorite websites. When you type in the unified search field, it shows you top hits and search results from
