

17. Cellular Data Usage

It's a task to keep a check on our cellular data usage every month. And we don't want many useless apps hogging data. iOS 7 provides a neat way to restrict data hogs to Wi-Fi. Go to Settings > Cellular and scroll down to see the Cellular Data Usage. There you'll find a breakdown of all the apps and their current data usage. If you want to cut back any app from using cellular data, you can simply toggle the switch provided next to it. Check System Services and their data usage on the next page.

Keep tabs on that expensive data

18. Weather app

All new weather app, wouldn't only just give you the weather details of the day and the coming week, but it will now give you a the look and feel of the weather outside with subtle animations in your phone.

When you open the app, it displays the location, weather type and temperature of today, and the forecast for the next five days. Tap once on the temperature and you can see other information like humidity, chances of rain, wind and what temperature it feels like. Swipe from right to left on the area showing an overview of the day's weather, and see how the weather will change throughout the day. Slide elsewhere on the screen to see other locations.

Good day to venture outdoors?

19. App Store: Near Me

A new tab has appeared in the App Store called Near Me. Yes it sounds a little strange, but it comes in handy when you're visiting a new town and shows all the touristy apps for you. Basically, it lists the popular apps based on your current location. So when you go on a trip and
