

you want to know the local transportation and other city-guide apps for tourists, you must avail this feature.

20. Location Services

Turn on Location Services to allow iOS 7 to access your location using GPS and Wi-Fi. It keeps an eye on your whereabouts to personalise Notification Center and improve accuracy of Maps. You can turn on/off Location services for selected apps. To do that go to Settings > Privacy > Location Services, where you can toggle the feature on or off. Turn off Location Services when you're low on battery.

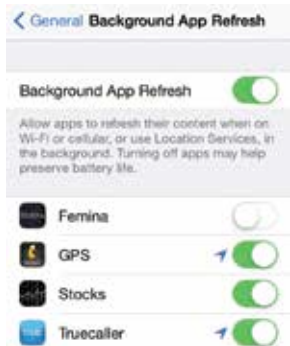

Another slick feature of iOS 7 is that it keeps your location history. You can view your most recently visited locations on a map by going to Settings > Privacy > Location Services > System Services > Frequent Locations (another feature specific to iPhone 5 and up). The blue circles show where you've been and when. You can clear the history from this page. If you think it's creepy and you don't like being watched, you can also turn it off from there.

Switch on location services

21. Background App Refresh

Another welcoming feature of iOS 7 is that it allows your apps to refresh their content while running in the background. It is beneficial when you have to multitask. By default, all apps are set to refresh automatically, and end up draining a lot of juice from your phone or tab. You can turn it off selectively for some apps by going to Settings > General > Background App Refresh.

Finally background data flows!

22. Update Apps automatically

You don't have to worry about updating your apps anymore, iOS 7 will do it for you. If you have multiple devices with the same apple id, it will also download apps purchased in one, on the rest of the devices. Now you wouldn't be irked by the small red mark on the App Store
