

Just swipe your finger from right to left, and you'll see the timestamp for every message. Very necessary when you are not sure whether the dinner is tonight or already happened last night.

25. Create events

Another neat little trick that comes with iOS 7 is how you can create events and calendar entries based on text in an iMessage. If your friend invites you for dinner “at 8pm on Thursday”, you can click on the underlined date and time and add a calendar entry directly from there.

This feature has been there in OS X for creating calendar entries based on text in email, or a web page.

Lo and behold! Timestamps appear!

26. Delete messages

Do you want to delete texts from your conversation? In iOS 6, you could just tap on Edit on the top right corner of the conversation screen, and it allowed you to select individual messages to delete, or clear all messages. One of our gripes is the change in this already simple process. Now, to delete any offending text press and hold it and select More. You can then choose to delete that message, or select the Delete All option which now appears at the top of the screen. You can't delete messages from the recipient's phone though. So drunk texts are still a problem. Are you listening Apple?

27. Delete Emails

Unlike iMessages, deleting emails has become a bit easier in iOS 7. Before you had to tap Edit, and click on those red circles to select emails and then press Trash to delete selected emails. With iOS 7 you can just swipe from right to left where you get the option to Trash or More. Select More and you get options to Reply, Forward, Mark as Unread, Flag, Move to Junk, or Move Message.

28. Maps

Maps has always been a problem area for Apple. iOS 7 adds a feature or two in it to assuage concerns though. Maps now goes full screen to give you
