

would take up unwanted screen space for people who didn't want to read magazines on their device. The idea behind it was that Newsstand was already a folder of items, i.e. magazines, periodicals, etc. Finally iOS 7 lets you put away Newsstand in a folder, and hide it from your view. This is also helpful for those who use this app, as it can now be placed in a more generic folder.

33. Keyboard Shortcuts

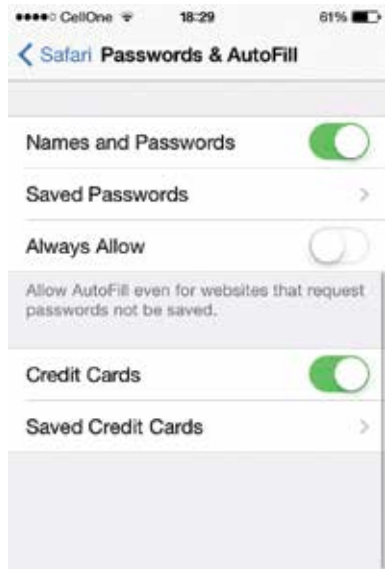

The keyboard in iOS 7 is designed on the basis of "what you see what you need". When typing messages, the keyboard is pretty basic. It accommodates changes depending on the app's function.

If you're using Mail, you'll see an @ button displayed prominently near the spacebar. Earlier, you had to press 123 to get it. When using Twitter apps, @ and # both symbols appear - @ for usernames and # for hashtags.

The death of the '.com' button on the keyboard inside Safari came as a shock to us. Yes the omnibar, or the unified smart search field is a great add, but we still need the ".com" button. As it turns out, it's not completely gone. Long press the '.' key and slide your finger up to access '.com', '.edu', '.org', '.in', '.co.in', etc.

If you need to type accented characters and other modifications of a character, long press to see a selection of accented characters to choose from. Tap and hold the '\$' sign to use other currency symbols.

Punctuating sentences used to be a little tricky - you have to tap on 123 every time for a semi-colon (;), apostrophe (') or a slash (/), and then return to alphabets by tapping ABC. To save yourself from the hassle of switching back and forth between keyboards, you send your texts in the most incomprehensible form, which are quite the recipient. Here's a neat solution that will help you, and your friends to bear with your texts. Tap and hold the 123 key,
