

From the main calendar screen you can zoom into monthly and daily levels by touching the month and days sequentially. In the month view all days with scheduled events appear with a tiny dot under them and the current date in a large highlighted circle. You can slide across months from this view and touch Today in the bottom left to centre back to the current date. Touching a specific date further drills down the calendar to an hourly view which neatly organised your scheduled events and activities based on the details you've entered. For professionals, the iOS calendar syncs with your work email account if you choose to link them so that if you accept an appointment through your Outlook at work it will then add them to your devices calendar with all the details.

Camera

The iPhone 5 series of smartphones come with an 8 megapixel camera in the back of the body and 1.2 megapixel camera in the front. Accompanied with face detection, auto image stabilization, LED flash The video recording happens in full HD (1080p) at 30 frames per second and an autofocus as well. Let's take a quick look at the new features that iOS 7 brings to the set up.

Touching the app with the camera icon on it takes us directly to the view screen of the camera. The largest amount of real estate on the screen is devoted to the camera's view with basic options carefully trimmed to the side which allows you a clear picture of your shot.

The top or left side of the screen gives you three options in portrait or landscape mode respectively. The options: Flash, HDR and Switch Camera are neatly lined to the edge. The flash option when touched slides across and allows you to choose between Auto, On and Off settings. If left undisturbed it slides back automatically to the earlier view. The HDR option simply activates or deactivates on touching. And the Switch Camera view changes camera view from front to back and vice versa at a single touch.

The bottom of the screen has four options you can slide across: Video, Photo, Square and Panorama. The default starting point is always Photo.

Photos/Stills

An excellent new feature in the iOS 7 is the focussing shortcut in the volume up button. Simply holding the button focuses the shot before taking it giving you a sharp image. Holding down the volume down button allows you to quickly take multiple shots in burst mode. If you want to have even more control over your focus and exposure together, touching a part of the image on
