

video is recording by touching the white button next to the red record button. You can start and stop recording by either pressing the red button or the volume control buttons on the side. Turning the flash on for video results in a reasonably bright LED spot light that helps illuminate most things close to the camera, especially good for faces.

Pano

Sliding further to the right this option dynamically allows you to generate a panoramic image by physically panning the camera across a landscape. The sensors in the camera guide you via on-screen guidelines to ensure you have a clean image. The camera stitches together the images from your pan and presents you with a gorgeous wide screen panorama that can even go beyond 180 degrees of vision.

Great new ways of capturing video

Music and iTunes Radio

The iOS 7 interface radically changes the Music app it is still very intuitive with: Radio, Playlist, Artist, Songs and More options at the bottom of the screen.

Once you've loaded music on to your device via iTunes or purchased music via the phone App you will find that it's been neatly organised in the usual categories. You can also make Playlists on the go directly from the app without having to connect it to a laptop or computer for the iTunes application. But the most significant addition to experiencing music on the iOS 7 device is iTunes Radio that is part of the Music app.

iTunes Radio is designed along the lines of Spotify or 8Tracks which you may be aware of from before but basically it allows you to stream music
