

more sensitive to Asian names (a little more, lower expectations) but also receptive to verbal teaching. Just say “That’s not how you pronounce XYZ” and Siri tries like the eager child attempting to please you. It may take a bit of doing but it does learn.

Contextual Questions

Siri can also handle elementary stabs at contextual questions - “What song is playing?” - for example when you are listening to iTunes Radio or your own Music. Using it with iTunes Radio makes for an interesting conversation as Siri can be instructed to play music by moods as well as artists or genres.

Siri also provides the benefit of Wikipedia search at the push of a button. Simply say “Search Wikipedia...” and it will do its version of a hands-free elocution on the topic. You can also use it to search Twitter for trending topics by framing the question “What is Twitter saying about...” but it still apologises for not making any headway with Facebook. That’s alright. We forgive you Siri.

And although Google is can’t be set as the default search engine for Siri you can instruct Siri to search only Google by saying “Search Google for...” and it will present your results in Safari web browser.

Siri can learn quite a few things

Closing Apps

With apps numbering in the dozens and constant active updates not only a drain on the battery but also your data plan it always helps to close apps that you don’t need to immediately access. The kill app option has also changed
