

since the last iOS and is now a button/swipe combo: simply double click the home button and swipe the app you want to close upwards and it will shut down.. It's a lot more fun when you swipe them two at a time. It's just that easy and simple, not to mention fun. Really.

## Find My iPhone / Activation Lock

Let's face it - we live in a bad world, where everyone wants to separate you from your Precious, your iPhone. And even though the Find My iPhone app has been around for a while and is usually helpful in finding misplaced devices, it hasn't discouraged thieves one bit. And although you should most definitely activate the Find My iPhone app to be on the safe side

you can rest assured that iOS 7 has something new to protect your device.

By using Apple's new Activation Lock feature even through your iPhone may be erased by thieves they will not be able to profit by it since activating the devices would require your iCloud password. We can just hope this information spreads quickly amongst the criminal underworld. For the sake of the Precious.

## Passbook

A surprising new feature with iOS 6 was Passbook and it continues to surprise with iOS 7. Passbook allows you to store all your passes for websites, apps, QR codes, boarding passes, movie tickets and loyalty cards in one place for ease of use. You can also share your passes through email or messaging through the app itself. As more and more retailers and service providers go digital and online, Passbook compatible apps will flood the Indian iTunes Store making life a lot more easy for a paperless world. 

Apps be gone!
