

Access essential toggles quickly

iOS 7 introduced 'Control Centre' to allow you to quickly access all the essential and most used toggles. It is a hassle free way to use the essential features anywhere from your phone. It includes shortcuts for Airplane mode, Wi-Fi, Bluetooth, Do not disturb and orientation lock. Along with this you can also change brightness, control music and volume. No need to go to Settings anymore. It also offers five handy shortcuts – flashlight, compass, calculator and camera. Control Centre can be accessed from lock screen as well, to open it, swipe up from the bottom edge of the screen.

Bring down the Spotlight search

Didn't find Spotlight search? Don't worry its not gone. Spotlight search is still there in iOS 7 only thing is it is not on its default place. To get the Spotlight search swipe down on the icon grid on any home screen page.

Swipe down on the icons grid to get the Spotlight search

Disable control centre within apps

Control centre is indeed a very useful feature introduced in iOS 7, but it can be annoying at times. It may accidentally pop up while playing a game or scrolling through a list. You can prevent Control Centre to access within apps by navigating to **Settings > Control Centre > Turn off Access Within Apps**.

Prevent Control Centre access from the lock screen

There's no need to prevent Control Centre to be accessed from lock screen, but if you're concerned about privacy we will suggest you to do it. Go to **Settings > Control Centre > Turn off 'Access on Lock Screen'**.

Prevent Notification Centre access from the lock screen

The notification centre can be accessed from lock screen as well. Though it is handy, it impends privacy as all your notifications are easily accessible. Anyone can easily read the message, reminders, calendar excerpts. It is thus recommended to prevent notification centre access from lock screen. Go to **Settings > Notification Centre > Turn off 'Notifications View' and 'Today View'**.
