Reduce parallax effect

Whenever you tilt or move your device, the background moves in conjunction with it. That's the parallax effect. Though it looks cool, some users suffering from motion sickness don't like it. If you're one among them, go to **Settings > General > Accessibility > Reduce Motion** and turn it on. It will reduce the parallax effect.

Create your own parallax wallpapers

The default wallpapers of iOS 7 are already parallax compatible, but what if you want to create your own parallax wallpaper? A normal wallpaper will appear slightly blurred if it is used in place of parallax wallpaper. A parallax wallpaper is the one which has 200 pixels more on each side of it. If you want to create your own wallpaper, here are the exact resolutions.

iPhone 5: 1536 x 1040 | iPhone 4S: 1360 x 1040

iPad 3 and iPad 4 - 2448 x 2448 | iPad 2 and iPad Mini - 1424 x 1424

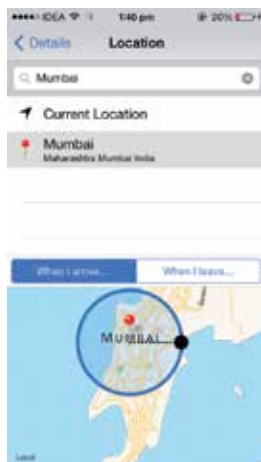

Change system's text style

If you find the typography of the operating system too light you can stylize it by the way you want. It can be increasing the text size or making it bold. To increase the text size go to **Settings > General > Text Size > Drag the slider**. This only works with iOS 7 compatible apps.

To bold text go to **Settings > General > Accessibility > Turn on Bold text** and then restart your phone.

Adjust Geofence Radius

'Remind me at a location' in Reminders app just got precise in iOS 7. Now you can set the geofence radius of the location that you want to be reminded at. Adjusting Geofence radius is setting up a boundary to the location that will trigger the reminders notification. To adjust Geofence Radius go to **Reminders > Add a new reminder > Tap 'info' button > Turn on 'Remind me at a location' > Location > Select your location > Drag the black dot to change the radius**.

Drag the black dot to adjust the Geofence radius
