

Add infinite apps to folders

Earlier versions of iOS allowed only twelve apps to be placed in each folder. iOS 7 removes this restriction and allows you to add infinite number of apps in each folder.

Navigate to previous menu with a swipe

Now use gestures to go back to previous menu instead of using the 'Back' button. Just swipe from left edge to right on your screen and you'll be on the previous page. All the primary apps like Messages, Photos, Notes, Settings etc and iOS 7 compatible third-party apps have support for this gesture.

Watch out for the live clock

If you've closely seen the clock app icon on the Home Screen, you'll observe it is not static anymore. iOS 7 makes the clock app icon dynamic that displays the current time along with real time seconds hand.

Go back to previous menu by swiping from left to right

Switch between digital and analogue clock with a tap

If you cannot understand time on an analogue clock or want to know the exact time of a place in World Clock, just tap the analogue clock that appears in front of the city name. It will turn into digital and vice versa.

Quickly open Music app from Control Centre

Control Centre provides all the music controls there itself. Still if you want to quickly get back to the music or podcasts app tap the title of currently playing music or podcast.

SAFARI

Surf with 24 windows

Safari removes the 8 window limitation; now supports surfing with 24 windows simultaneously with a neat and cool interface. You'll never have to sacrifice a page if you want to add another.
