

PHOTOS

Know the new interface

The photos app gets a retouch with complete makeover and new additions. The photo library is divided by date and location into Moments, Collections and Years. Moments further separates the photos by day and location; sorting each by the day it was taken. This sorting makes it easy to find a particular photo between hundreds of them.

Add/remove filters anytime

Filters are not just restricted to camera app alone. You can add filters to your existing photos or even remove them anytime. To do it go to **Photos** > **Select a photo** > **Edit** > **Tap the three circles** > **Select a filter**. To remove a filter follow the same procedure and select 'None' in filters.

MAIL

Use the Mark All option

The native iOS mailbox deprived 'Mark All' option till iOS 7. All these years we manually selected each and every mail to mark it as Read. Now here's a handy way, Go to **Inbox** > **Edit** > **Mark All** > **Mark as Read**.

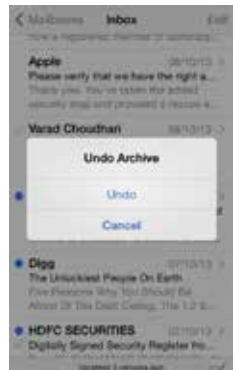

Undo Archived emails

Archiving an email is just a swipe away that's why we accidentally do it most of the time. What if you've did it? Don't panic, just shake your phone to bring up the Undo Archive dialogue box.

PRIVACY

Use 'Do Not Track' mode

Safari adds support to a new 'Do Not Track' mode to provide little extra privacy while you surf. When it is enabled, websites will not use cookies and also will not be able to track you. To enable 'Do Not Track' mode go to **Settings** > **Safari** > **Turn on 'Do Not Track'**.

Shake the phone to undo Archive or Move to Junk

Limit AdTracking service

Every device generates an unique tracking number that informs advertising company about your browsing habits. The company uses this information
