

iPhone service. This passcode prevents thieves from turning off Find My iPhone service, erasing your device or re-activating your phone. Useful but even problematic. To turn on Find My iPhone service go to **Settings > iCloud > Turn on Find My iPhone**. To add Activation Lock you'll need Find My iPhone app which is available for free on the App Store.

MAPS

Set default direction type for Apple Maps

It is reported that the step-by-step navigation of the Apple maps is significantly improved. So depending upon your area you can rely on Apple maps. If you are one such user, there's a way to set default direction type to walking or driving. Go to **Settings > Maps > Go to 'Preferred Directions' section > Select Walking/Driving**.

See your most visited places

iOS keeps a track of your frequently visited places in the background. You can see your location history along with the date and time of visit by navigating to **Settings > Privacy > Location Services > System Services > Frequent Locations**. This is also benefiting Apple to improve its mapping services by providing GPS coordinates of your frequent locations.

APP STORE

Turn on/off automatic App updates

iOS 7 can let you update your apps automatically. With it you can get rid of the annoying notification badges appearing on the App Store icon and have the latest version of app installed on your device always. We will suggest you to keep automatic updates turned on only if you're using Wi-Fi network. You can turn it on or off from **Settings > iTunes & App Store > Updates**.

Search for purchased apps

If you're coming from another iOS device this feature will be handy for you. App Store adds a way to search for your purchased apps. With this you'll know whether your old purchases are installed on your new iOS device or not. To find your purchases go to **App Store > Updates tap > Purchased > Search**.
