

highly polished look. Of course, if you're an Amazon fan with a bunch of Kindle eBooks to your name, this should be a no-brainer, but the recent design changes have made this a compelling choice even for those who don't own a Kindle library.

6. eBay

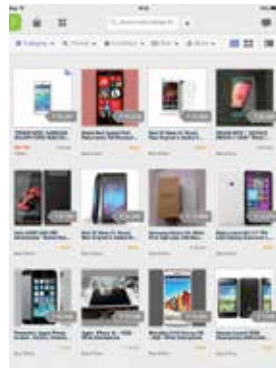

While most of us love the comfort of shopping online, using a mobile device to shop online remains a rarity. Most eCommerce apps tend to be clunky and slow, not to mention unnecessary (A mobile optimised site will usually suffice). However, eBay's new iOS 7 apps hopes to change that, with a gorgeous interface inline with iOS 7's style guidelines. The iPad version features a night-mode that can make using the app easy on the eyes in low-light areas. The app lets you use all of the website's sorting and filtering options, and can pinpoint the seller's location on a map for you. The new version also lets you leave a note for the seller including any special instructions or a thank you note for speedy delivery.

7. Zomato

Zomato, the much lauded startup that aims to solve the all-too-familiar dilemma of "Where do I eat today?" has always been known for its stellar apps, and the iOS one is no different. The newest redesign flattens out the navigation icons, and presents the user with large swipeable photos of popular restaurants in your city. If you're too lazy to sift through all the restaurants in your area, Zomato will try to narrow down the problem by asking if you want to order in, go out for a meal or just hangout with friends. If you see something you like, you can check the menu and call the restaurant directly from the app and order in or make a reservation.

Kindle's new look feels right at home on iOS 7

eBay's iOS 7 app makes shopping from your mobile device a breeze.
