

The official Facebook app has traditionally been a slow and buggy affair, thanks to Facebook choosing to use an HTML5 approach to writing the app. Several rewrites later, the Facebook app received enough native code inputs to make it stable and usable again, and the newest update brings it up to scratch with iOS 7. A translucent status bar that changes colour based on what you're viewing, as well as a new tabbed menu-bar along the bottom of the screen that lets you quickly access your most Newsfeed, Friend Requests, Notifications and Messages. The app seems to have come of age, both in terms of functionality and aesthetics.

11. Yahoo! Weather

Yahoo's Weather app for iOS 7 is a stunningly beautiful example of an iOS 7-ready app. The app fetches photos from Flickr corresponding to the current city and displays it in the background, while the foreground contains sparse but clean typography. If you scroll up to view more weather information, the background photo is blurred to make the text more readable – not unlike the blurred transparency of the Notification Center in iOS 7. Tilting the screen reveals the familiar parallax effect that also found on the iOS 7 Home Screen, lending a slight 3-D feel to the app.

Yahoo! Weather fetches background images from Flickr

12. Photo Editor by Aviary

Aviary's Photo Editor remains one of the most powerful photo-editing apps on iOS, and the newest update brings a complete overhaul of the app's design, as well as a one-stop shop called the "Supply Shop" where you can buy all

Aviary comes with a full set of photo filters.
