

of the filters and effects that Aviary sells. The design features a slightly translucent background with minimalistic, white icons throughout the app, and it now lets you share your photos directly with Facebook, Twitter, Instagram and China's Seina Weibo.

Instagram's navigation icons have been flattened for iOS 7

13. Instagram

One of the most beloved apps on iOS, Instagram received a minor update to bring its design more in line with Jony Ive's philosophy of 'deferring to content'. The new app features the now-familiar flattened and translucent status bar along with flattened icons on the navigation bar along the bottom. Photos now occupy the full width of the device, eliminating any margins the app previously sported. The app's icon though, remains strangely unchanged, with Instagram having no plans to change the icon anytime soon.

14. Quora

The Quora app for iPhone has

been redesigned from ground up, removing a lot of the chrome and placing a greater emphasis on the content. Gone are the tabs that filled the lower part of the screen – they've been replaced by invisible tabs that one can swipe between to reveal Top Stories, Open Questions, Blogs and Reviews. Tapping the Quora logo on top reveals a navigation drawer allowing quick access to your Questions, Answers, Drafts and Messages. Though the current app is iPhone-only, an iPad version seems to be scheduled for later this year.

Quora's new app makes heavy use of gestures for navigation

15. Newsify

Since Google Reader's demise, Feedly emerged as the most popular replacement, even going so far as to clone the Google Reader API to let third
