Music, Comics, Anime / Manga, TV Shows etc. At the end of the day, making games is a business and you are supposed to make a game that people will be willing to pay for. Games are cultural products and you cannot even accidentally offend people of a certain country because you didn't know something in your game is considered distasteful in their culture—cultural awareness is necessary.

Your typical work routine

Every designer has a different style of work and every game studio will have a different work-culture and expectations. But, at the end of the day, a major chunk of your work is actually communication. Before the start of any project, Game Designers typically make documents called Game Concept or Pitch Documents which are small 1 or 2 page documents describing - say - a new idea for a Shooter game. This is the time when a Game Designer has to be an excellent salesman with remarkable showmanship—enough to convince his peers and the investors alike. Every studio has its due process of selecting game concepts which could be produced. Yes, there is no lack of ideas in this industry. You work with teams of extremely talented and creative people and everyone has their own ideas of the game they would like to have made and work on. Normally, peer review and business feasibility are benchmarks for selection of such a game. Once a game enters production, Designers work on a document called the GDD or the Game Design Document. A GDD, is sort of like a bible of the entire game. It describes everything about the game right from the story to the UI to the Characters to the Gameplay. The purpose of such a document is to communicate to the team as to how the game will play. So, your Programmer is confused how high the character should jump? The Level Designer is confused how
