

Automated testing tools certifications

There are various certifications for automation tools such as QTP, Loadrunner, Winrunner, Rational Tools etc. These certifications help to evaluate your knowledge and confidence on these tools and are a great add-on for an impressive resume.

Co-founder of BQurious Software, Susheel Yadav, states, “Advent of Agile methodologies has also prompted the move towards test automation due to short release cycles. In order to stay competitive, manual testers are now required to pick up skills on various automation tools such as HP QTP, MS Coded UI and Open Source tools such as Selenium and Watir.”

Education and training – Crafting the path

Institutes such as SEED Infotech, Pune hold diploma programs catering to Software Testing. PureTesting and QACampus are two of the few training organisations that provide targeted learning packages; they have specialised trainers who teach and conduct hands-on sessions revolving around specific testing.

To become an automation expert, you must attain good knowledge of automation tools such as Selenium, HP QTP, VSTS, Rational Functional Tester, HP Quality Center etc.

With great software testing your PC won't need a doctor ever
