

- ▶ **Performance Testing:** As a Performance Test Engineer, you'll be responsible for checking application responsiveness. This step can only be performed when all other test activities have been completed. It helps identify the load or stress an application can bear under certain situations. Performance Testing is not applicable for all types of projects and is done only if the client demands it. Hence, Performance Testers are less in demand as compared to their counterparts.
- ▶ **Business Analyst:** As a Business Analyst, you'll be responsible for analysing and assessing your company's business model and work flows, and especially how it integrates technology. Based on your observations, you'll suggest and drive process improvements.
