

are plenty of pools out there but you need to join up in a pool with a lot of participants. The following four have the highest number of participants and the highest output.

- ▶ Slush's pool (mining.bitcoin.cz)
- ▶ BTC Guild
- ▶ Eligius
- ▶ GHash.IO

When you register an ID at each pool, you will be given a worker ID and PASSWORD. For each worker [i.e. individual machine] you need to create a new worker ID and PASSWORD. If you own 5 ASIC machines then 5 IDs and PASSWORDS will be needed, one for each. You can join multiple pools as well and then gather different worker IDs and PASSWORDs from each pool.

cgminer Example

Let's say you've finally got the hardware together and are ready to mine a few bitcoins. We'll walk you through a simple cgminer command line. At each pool you'll get a pool URL and a PORT. Aside from that you need to get the following ready.

- ▶ Hardware [GPUs/FPGA/ASIC]
- ▶ Appropriate drivers installed
- ▶ For GPUs you need to install the OpenCL package from the respective manufacturer

AMD

If your cgminer windows looks like this once you run the command then you've got it right!
