

Bitcoin can become a true global currency only if it adapts to the best of humanity – community and trust in our fellow beings. Sappy but true.

doings. In the world of Bitcoin this would be impossible. You won't be able to trust anyone when it comes to money.

The current version of the Bitcoin protocol doesn't account for the positive side of trust when it comes to people and only uses trust in machines and mathematics to present its cause. This is a very powerful advantage for Bitcoin but also its greatest weakness. But that isn't the end. Bitcoin is created to be

organic and adaptive as long as the majority of people accept those changes. It is not wrong to be hopeful that yet to launch currencies like Buttercoin and Laxmicoin will be built keeping in mind the Asian sensibility - one that places the ideal of individual freedom and community faith side by side. How these two balance out in the future, only time will tell, but it is hard to imagine virtual currency replacing paper money anytime soon - how can it when even digital books have barely even begun to replace paper ones?
