

It can print using PLA and ABS, with a resolution of 0.1 mm. Also included is a micro SD slot, which enables you to print directly from the printer. Precision chrome hardened shafts are used in the machine along with the pulley and belt specifically designed for linear motion. The Graber i3 has a build volume of 200 mm x 200 mm x 200 mm and a nozzle diameter of 0.4 mm. The size of the machine without the spool and power supply is 45 cm x 35 cm x 38 cm. The Graber i3 kit costs around Rs.33,749 and is a good alternative to all the expensive 3D printers out there.

16. MendelMax 2

It is a complete reinvention of the 'MendelMax', which in turn is based on the Prusa. The MendelMax2 is faster, easier to source and has fewer parts. The framework has aluminium extrusions and flat plates. The printing area dimensions of the MendelMax 2 are 230 mm x 310 mm x 225 mm and its maximum print speed is 150 mm/sec. It can increase depending on the part being printed and the material used.

17. Mix G1 Plus

One of the most affordable and high-precision 3D printers, Mix G1 Plus is based on the RepRap project. It costs around \$549 for a kit and has print dimensions of 160 mm x 160 mm x 160 mm. It supports a minimum layer thickness of 0.1 mm and nozzle diameter of 0.30 mm and printing with PLA and ABS. It weighs around 7.8 kgs and supports printing through an SD card. It's compatible with Windows, Mac OS and Linux.
