

designs of your own. For those of who you wish to return the favour, the same forums are available, to not only share your own creations but in some cases capitalise on them as well.

Currently the web is filled with many types of design forums which cater to the various sides of model design - 2D, 3D, solid modelling, surface maps, layered models like STL files and 3D animation models. Although most of the models and designs available can be used by home users on freeware and professional CAD programs, not all of them are ready for printing purposes. As the 3D printing community grows the number of specialised 3D printing model design sites will become more visible. Until then, there are a few key sites that make 3D print ready design available through various copyright licenses including freemium and paid-for creative commons.

Create, Share, Sell and Profit

The 3D printing and design resource websites in this section cover various categories - such as repositories - where designs are simply stored for free use, e-commerce sites - where users can buy, sell, request and share

The types of designs that can be made using home 3D printers is surprisingly diverse.

designs, and search engines - meta-engines that scan through the web to give you what you're looking for specifically. We will take a walkthrough of all these online resources and give you the details that can help you find what you're looking for.

1. **123D Gallery** - This website is a hybrid of online 3D design, print service and community gallery. Users can use the tools for creating their own 3D print ready models and then share them with the website's community. These designs are easily accessible for downloading and personal use.
2. **3D Burrrito** - 3DBurrrito is one of the best places on the web for hobbyists, amateurs and design innovators who wish to sell their designs at affordable rates. One of the drawbacks of the website is the lack of additional information on how to use the 3D designs purchased from the site with different types of printers so a significant element of trust in the designers
