

CubeHero's community shares some of the most fun designs; from phone cases to robot body parts.

10. **Cubify** - The Cubify marketplace is a mix of free and paid designs along with the 3D printing service option. All the design files are made to be used with the Cube 3D printer (of 3D Systems) and can be downloaded for personal use. So far the number of files on the website is limited but if you have a Cube 3D printer at home, its one of the best resources for design files.
11. **Fabforall** - In terms of a meta-search engine useful for finding all things 3D printing related, Fabforall is a gold mine. Working from an aggregating algorithm, the website collects information and links to a vast number of 3D printing websites and multiple design storage repositories for easy indexing. The search interface is still under development and can prove tricky when searching for something specific. However, forum discussion indicate that changes for a new interface are already underway which will streamline a lot of the problems in the near future.
12. **GitHub** - Another popular code repository for 3D printing resources, GitHub is an old-school share community where designers and creators can submit their designs. The Github website comes with a browser viewer that allows a view of the 3D models in STL file format for a quick preview before downloading. There are more than 20,000 files already uploaded to the site and need to be searched using the STL file format for 3D print purposes.
13. **Google Custom Search 3D Printing** - After introducing the free to use, Google SketchUp CAD application, the number of ametuer and hobbyist made designs have flooded the internet. Using Google's custom search
