

design source. But it does have some interesting options which can get you free designs for personal use. The option to upload and sell your own design is an active service on the portal. The website has a crew of professional 3D model designers who upload files for 3D printing which need to be purchased via the website, however by registering an email, five free

design downloads are allowed. You can increase your access to these free downloads if you share and spread the website to others.

MyMiniFactory is a great alternative for downloading professional grade designs from a highly trained team of designers.

18. **Renderosity** - Another old-horse for 3D modelling resources, Renderosity has been active for such a long time that it has accumulated the best and largest number of 3D print and design users on the web. Its designs are edit friendly using most of the popular design softwares like Maya and Autodesk suite. The website also works as a marketplace where you can upload and sell your designs but the profit share is low compared to other websites.
19. **Shapeways** - Another popular all in one 3D printing service on the web is Shapeways. Although they primarily work through 3D printing on order, they are also a great place for budding designers to sell their 3D print files. The printing is done by Shapeways but the designs can be selected from a range of designers. Shapeway's success has led to many home users to consider the online medium for selling their creations.
20. **Sketchfab** - It's best to think of SketchFab as the YouTube of sharing 3D design files, except without the video. Its cool and elegant interface hosts your designs which can then be embedded anywhere on the web for sharing. The site gives you access to a lot of 3D model designs but not all of them can be clearly identified as meant for 3D printing. Its a bit of a treasure hunt.

Bonus: Torrents and The Pirate Bay - It goes without saying, that most things digital on the internet have a funny way of finding them-
