

selves on the torrent file sharing network. And if you know what you're searching for it's easy to find anything. Similarly, 3D print files are also taking advantage, with the use of the torrent system as an easy and efficient way of sharing personal files with the larger community. One of the most popular designs found on the network which is of practical day to day use (American use) is guns. But keep digging using the "physibles" tag and you'll be surprised with the free goodies you find. Happy hunting and please seed.

Top Indian 3D Printing Sites and Services

All of the websites we've discussed so far are based outside of India and can be accessed only by a select group of people. Due to that limitation their main use is as warehouses for 3D design files which we in India can work with on our own. It should be noted that as the popularity of the technology and availability of the materials grows in India, the prices and number of companies providing 3D printing services is likely to increase. This section looks at the Indian scene and focuses on print services, who will not only help you design, but more importantly provide 3D printing services directly to you.

3Dify

[\[http://www.3dify.in/\]](http://www.3dify.in/)

3Dify is a service based website that started in early 2013 and is based out of Navi Mumbai. Its primary offerings cater towards small business' and home users interested in experimenting with personalised objects using 3D printing. The main business of the website comes from custom jewellery and architectural models, along with their ability to deliver rapid prototyping for manufacturing business'. Their simple website is mainly for informational use with no access to designs or even sample photographs.

3dLabs

[\[http://3dlabs.in/\]](http://3dlabs.in/)

3dLabs is nearly a one man operation running out of Kolkata and started by Prateek Lohia in early 2013. It's a simply run online business with the minimum of online interaction. Designs are usually sourced from other online resources such as thingiverse.com and are allowed basic customisations such as text addition before they are printed and shipped to the customers. It has doubled its business over the last year from one 3D printer
